                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Expressed sequence tags (ESTS) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLSI protein. The present sequence is protein encoded by cDNA from the wheat clone wreln.pk012.d3.fils which is homologous to COII. The COII and LLSI proteins are involved in disease resistance. The COII and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                               nucleic acid sequences engoding new disease resistance factors, inl for producing plants with increased resistance to pathogens and to ten for herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  557

```
expression of (II) in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. (I) or their fragments are also used for gene mapping (e.g. for plant breeding) and to identify loss of function mutants. Polypeptides (II) encoded by (I) are used to raise specific antibodies (for detection of (II)) and to design and/or identify specific inhibitors of (II), potentially useful as herbicides. This sequence is the wheat COII clone created from contigs wreln,pk0122.d3 and wlln.pk0018.f8 as described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid sequences encoding new disease resistance factors, useful for producing plants with increased resistance to pathogens and screen for herbicides.

Expressed sequence tags (ESTS) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LLSI protein. The present sequence is protein encoded by cDNA from the wheat contig which is homologous to COII. The COII and LLSI proteins are involved in disease resistance. The COII and LLSI proteins are involved in disease resistance. The COII and LLSI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LLSI proteins may be used to identify inhibitors of these proteins, which may be useful as herbicides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Expressed sequence tags (ESTs) from rice, wheat, soybean and corn cDNA libraries were found to be similar to cDNA encoding the Arabidopsis thaliana COII protein and the Zea mays LicS protein. The present sequence is protein encoded by cDNA from the soybean clone sgs4c.pk003.k23 which is homologous to COII. The COII and LISI proteins are involved in disease resistance. The COII and LISI protein in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LISI protein may be used to alter transgenic plants with increased systemic resistance to a wide range of pathogens. COII and LISI protein may be used to identify inhibitors of these proteins, which may be useful as herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid sequences encoding new disease resistance factors, useful for producing plants with increased resistance to pathogens and to screen for herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            29 VDVVLDCVIPYIDDPKDRDAVSQVCRRWYELDSLTRKHVTIALCYTTTPARLRRRFPHLE 88

An isolated polynucleotide (I) comprising a sequence (Ia) encoding a polypeptide (II) of at least 60 amino acids (aa) from any of 18 specified sequences, given in the specification, or the complements of (Ia), is new. Herbicide. (I) encodes disease-resistance factor polypeptides (II) and can be used, in sense or antisense orientation, to alter the expression of (II) in cells, particularly to produce transgenic plants with increased systemic resistance to a wide range of pathogens. (I) or their fragments are also used for gene mapping (e.g. for plant breeding) and to identify loss of function mutants. Polypeptides (II) encoded by (I) are used to raise specific antibodies (for detection of (II)) and to design and/or identify specific inhibitors of (II), potentially useful as herbicides. This sequence is the soybean COII clone sgs4c.pk003.k23 as described in the method of the invention
                                                                                                                                                                                                                                                                           New nucleic acid sequences encoding new disease resistance factors, useful for producing plants with increased resistance to pathogens and to screen for herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       29 VDVVLDCVIPYIDDPKDRDAVSQVCRRWYELDSLTRKHVTIALCYTTTPARLRRRFPHLE

Schnerch A., Schein J.E., Jones S.J.M., Marra M.A.; R. Generation and initial analysis of more than 15,000 full-length proceins and promotes that ubiquitination and degradation.

Proceins and promotes that ubiquitination and degradation.

Proteins and promotes that ubiquitination and degradation.

Proteins and promotes that ubiquitination and degradation.

Proteins and promotes that ubiquitination and degradation.

Proteins and promotes that ubiquitination and compensate omphably recognizes and binds to some phosphorylated proteins and promotes that ubiquitination and compensate of a SCF (SKPI-cullin-F-box) proteins and promotes that ubiquitination and egradation.

Proteins and promotes that ubiquitination and egradation.

Proteins and promotes that ubiquitination and egradation.

Proteins and promotes that ubiquitination and egradation.

Scholarch Light Light Localine and browner of a SCF (SKPI-cullin-F-box) subcritumar IP-box domain.

Scholarch R.F. Pox domain.

-[-FUNCTION: Probably recognizes and binds to some phosphorylated proteins and promotes their ubiquitination and degradation.

-[-SUBUNIT: Interacts with SKPI. Part of a SCF (SKPI-cullin-F-box) protein ligase complex (By similarity).

-[-SIMILARITY: Contains 1 F-box domain.
-[-SIMILARITY: Contains 11 leucine-rich (LRR) repeats.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "Functional annotation of a full-length mouse cDNA collection.";

Nature 409.685-690(2001).

-!- FUNCTION: Probably recognizes and binds to some phosphorylated proteins and promotes their ubiquitination and degradation.

-!- SUBUNIT: Interacts with SKPI. Part of a SCF (SKPI-cullin-F-box) protein ligase complex (By similarity).

-!- SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).
                                                                         Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Iloentification of a novel Skp2-like mammalian protein containing
T "Identification of a novel Skp2-like mammalian protein containing
T F-box and leucine-rich repeats";
I FEBS Lett. 459:175-79(1999).
- I- FUNCTION: Probably recognizes and binds to some phosphorylated
- Proteins and promotes their ubiquitination and degradation.
- FUNCTION: Probably recognizes and binds to a SCF (SKPI-cullin-F-box)
- SUBCELLUIAR LOCATION: Cytoplasmic
- SUBCELLUIAR LOCATION: Cytoplasmic
- SUBCELLUIAR LOCATION: Cytoplasmic
- SINILARITY: Contains I F-box domain.
- SIMILARITY: Contains I F-box domain.
- SIMILARITY: Contains 6 leucine-rich (LRR) repeats.
